

FEDERICO COLOMBO

Computer Graphics Engineer | Technical Artist | XR Developer

Phone: +39-3513078191 | Email: colombofederico28@gmail.com | LinkedIn: linkedin.com/in/federico-colombo10 |
Location: Turin, Italy

PROFESSIONAL PROFILE

Computer Graphics Engineer and Technical Artist specialized in real-time rendering, spatial computing (XR), and procedural tool development. Graduated with honors in Cinema and Media Engineering. Deep expertise in writing custom C++ rendering engines, optimizing GPU architectures (HLSL/GLSL), and leading multidisciplinary teams. Actively seeking to leverage hardcore engineering and project management skills to build scalable software architectures and high-fidelity interactive productions.

EDUCATION

- | | |
|---|--------------------|
| M.Sc. Cinema and Media Engineering - Politecnico di Torino | 2024 - 2026 |
| • Expected Grade: 110/110 Cum Laude (Graduating Dec 2026) | |
| B.Sc. Cinema and Media Engineering - Politecnico di Torino | 2021 - 2024 |
| • Final Grade: 100/110 | |

WORK EXPERIENCE

- | | |
|--|--------------------------|
| Lemons In The Room & Politecnico di Torino Turin / Florence, Italy | 03/2026 - Present |
| <i>XR Master Thesis - R&D Graphics Programmer (PulseEngine)</i> | |
| <ul style="list-style-type: none">Engineered PulseEngine, a real-time bio-adaptive telemetry and volumetric CSG framework in Unity 6 for standalone Medical XR on Meta Quest 3.Architected a Virtual DAW Mixer Console (DAWMixerWindow) inside Unity featuring channel strips, live OLED oscilloscopes, VU meters, and automated packet sniffing to route multi-sensor biometric streams (BLE, OSC, WebSockets, Serial).Developed a GPU-evaluated volumetric CSG pipeline with dynamic blend softness; eliminated the 180° normal inversion symmetry seam bug in triplanar mapping using the Morten Mikkelsen Surface Gradient formulation ($\nabla_{\text{surf}}(h) = \nabla h - (N \cdot \nabla h)N$), guaranteeing continuous C^1 micro-relief.Engineered a Compute Shader GPU voxelizer baking 128^3 distance grids in under 0.8ms, powering Physics-Only Mode: decoupled GPU fill-rate for VFX Graph particle adhesion to achieve a locked 90 FPS on standalone Quest 3 (2.91ms GPU time, 0B GC alloc) with a 61.3% GPU load reduction.Integrated affective biofeedback mapping autonomic stress along the neurological Bouba/Kiki spectrum; modularized the architecture to official Unity Package (UPM) standards for commercial release on the Unity Asset Store. | |
| Level Up Lab (Politecnico di Torino Student Team) Turin, Italy | 01/2025 - 07/2026 |
| <i>Technical Artist & Project Manager</i> | |
| <ul style="list-style-type: none">Programmed core gameplay mechanics in C# (Unity) and designed the technical architecture for the "Line Operator" project. | |

- Acted as Project Manager and Technical Producer, coordinating multidisciplinary teams of designers and artists to oversee artistic vision and technical viability.
- Developed custom HLSL Shaders and post-processing pipelines to establish the game's unique visual identity.

Politecnico di Torino | Turin, Italy

10/2024 - 01/2025

Teaching Assistant (GUI)

- Tutored students in UI/UX principles and frontend programming during weekly laboratory sessions.
- Wrote technical documentation and created high-quality instructional content to improve comprehension.

RKH SRL | Turin, Italy

09/2023 - 06/2024

Video Artist

- Operated professional cameras (RED, Blackmagic 4K/6K) and assisted DOP with complex lighting setups.
- Handled editing and post-production workflows using DaVinci Resolve for corporate content.

SKILLS

- **Languages:** C++, C#, Python, HLSL/GLSL
- **Engines:** Unity, Unreal Engine 5, Custom OpenGL Frameworks
- **Software:** Blender, DaVinci Resolve, Jira, Git
- **Management:** Project Management, Technical Direction, Agile Product Strategy

PERSONAL PROJECTS

- **Smart Cable Generator (Blender Tool):** Engineered a Python add-on for Blender to procedurally generate parametric hanging cables across multi-object modular assets with scale-independent catenary physics and automated mesh conversion for game engines.
- **Graphics Lab (Custom C++ Engine):** Engineered a custom OpenGL 3D rendering framework from scratch. Implemented Deferred Shading, Physically Based Rendering (PBR), and Silhouette Parallax Occlusion Mapping (SPOM) to study low-level GPU pipelines.
- **UE5 Tech Art Pipeline:** Developed procedural environments using PCG. Scripted a homing projectile system in Niagara and integrated MetaHumans with custom groom collision physics.
- **Character Rigging & Tooling:** Built complete custom FK/IK character rigs (Blender), painting skin weights and setting up constraint networks. Developed Python automation scripts to streamline 3D asset export pipelines into game engines.
- **Awaken Asylum & Nihil:** Developed an immersive VR educational experience (Unity) and a 2D Metroidvania prototype emphasizing complex transformation mechanics. Managed end-to-end technical production.
